...

Signs and symptoms of functional speech sound disorders include the following: omissions/deletions—certain sounds are omitted or deleted (e.g., "cu" for "cup" and "poon" for "spoon"); substitutions—one or more sounds are substituted, which may result in loss of phonemic contrast (e.g., "thing" for "sing" and "wabbit" for "rabbit"); additions—one or more extra sounds are added or inserted ...

Speech Sound Disorders: Articulation and Phonology: Signs ...

The phonological or phonemic level is the brainwork that organizes the speech sounds into the sound patterns to be produced. The sounds need to contrast with each other, or be distinct from one another, so that we can make sense when we talk. Articulation (phonetic) disorder is a speech sound disorder that affects the PHONETIC level. The child has difficulty saying particular consonants and vowels.

...

Read Online Articulation And Phonology In Speech Sound Disorders A Clinical Focus 5th Edition

A phonological disorder is a simplification of the sound system that results in patterned speech sound errors. An articulation disorder refers to problems making sounds. Young children often make speech errors. For example, some children have difficulty making the “r” sound and substitute this sound with a “w” (e.g saying “wabbit” for “rabbit”). Speech sounds can be substituted, changed, added, or deleted.
