Blockchain Basics | SpringerLink

A blockchain is a shared immutable ledger for recording the history of transactions, it provides a tamper-proofing and distributed way to conduct transactions without a central authority. Technically, the blockchain is a linear collection of data elements, where each data element is called a block. All blocks are linked in chronological order to form a chain and secured using cryptography.

Blockchain-Based Secure Data ... - link.springer.com

Creating a ledger on data, a blockchain makes it possible to designate the owner of each piece of data, to trade data pieces, and to market them. This book examines the formation of markets for various types of data from the theory of market quality proposed and developed by M. Yano. Blockchains are expected to give data itself the status of a ...
