Electrical forces play a dominant role in the structure of atoms and molecules and an important role in the structure of nuclei. Unlike mechanical phenomena, electrical phenomena are often beyond the direct perception of our senses. Consequently, electrical phenomena are more difficult to comprehend than mechanical phenomena.

Emergent phenomena at oxide interfaces | Nature Materials

It starts with fundamental electrostatics at interfaces and includes a detailed description of fundamental theories dealing with electrical double layers around a charged particle, electrokinetics, and electrical double layer interaction between charged particles. The stated fundamentals are provided as the underpinnings of sections two, three, and four, which address electrokinetic phenomena that occur in nanoscience, bioscience, and environmental science.

Electrophoretic light scattering - Wikipedia

The second-order polarization $P_2^{\omega}(2)$ arising from the oriented molecules at the interface can be expressed as where E_0 is the incident optical field at frequency ω . A second contribution to the second harmonic signal is from the bulk solvent molecules polarized by the charged interface.

Abstract. The importance of surface charges in establishing electrical characteristics of interfaces, particularly of the solid/liquid, liquid/gas, and liquid/liquid ones, has already been stressed in the opening paragraphs of Chapter 1.

In the second step, if there are ions existing in the liquid, such as H^+ and OH^- , the loosely distributed negative ions in the solution would be attracted to migrate toward the surface bonded ions due to electrostatic interactions, forming an EDL. Both electron transfer and ion transfer co-exist at liquid-solid interface.

Double layer (surface science) - Wikipedia

Received 17 September 1992; in final form 16 November 1992 The second harmonic generation from charged monolayers at air/water interfaces is shown to be linearly related to the interface electric potential. This dependence is due to the polarization of water molecules in the electrostatic field of the charged monolayer.
