The chalk strength is typically related either to the standard penetration test, the uniaxial compressive strength or the effective vertical stress and angle of friction. This diversity in design approach yields very different answers. CIRIA publications PG6 and PR11 detail the various design methods.

Design of CFA piles in chalk - New Civil Engineer

There is very little specific guidance on the design of foundations in Grade D chalk in published guidelines (Lord et al., 2002, CIRIA C574). A recent project in the East Anglia region has included shallow foundations on structureless medium/high density West Melbury Marly Chalk, New Pit and Holywell Nodular Chalk Formations at a site at 50 miles north east of Cambridge near Kings Lynn.

The CIRIA Project Report 11 'Foundations in Chalk' introduced a new chalk classification scheme. For structured chalk the grade is defined by a combination of fracture spacing and aperture, supplemented by an assessment of density. For structureless chalk the grade is based on the proportion of comminuted chalk matrix to coarser fragments.
