A 20-page Field Guide to the Solar System gives concise, pertinent information about the planets, our sun and moon, asteroids, and comets. The facts for each celestial object include its symbol, color, size, rotation, temperature, and an exploration time line.

Exploring the Solar System: A History with 22 Activities ...

Distances in the Solar System. Distances in the solar system are often measured in astronomical units (AU). One astronomical unit is defined as the distance from Earth to the Sun. 1 AU equals about 150 million km (93 million miles). Listed below is the distance from the Sun to each planet in AU (Table below). The table shows how long it takes each planet to spin once on its axis.
