The Pythagorean Theorem can be used to determine whether a triangle is right, acute, or obtuse. Think of the long side as c and the two shorter sides as a and b . If $e = a^2 + b^2$, then it is a right triangle. $25 = 9 + 16$ If $e < a^2 + b^2$, then it is an acute triangle. $36 < 16 + 25$ If $e > a^2 + b^2$, then it is an obtuse triangle.

The Pythagorean theorem ties these variable together: $X^2 + l = r^2$ You MUST, MUST, MUST know the above thoroughly, inside and out, backwards and forward, and can never-forget It. It must be part of you. Expect quizzes every day for the immediate future to test whether you know these definitions.

Unit 2 - The Trigonometric Functions - Classwork

This is a relatively short workbook focusing on the Pythagorean Theorem and its applications. First, students need to become familiar with square roots, so they can solve the equations that result from applying the Pythagorean Theorem. The first lesson of the workbook introduces taking a square root as the opposite operation to squaring a number.
