engineering is the application of rock and soil mechanics. Soil mechanics describe the behavior of the soil, and rock mechanics describe the behavior of different types of rocks. Most individuals pursue a degree in

geotechnical
engineering. Under this
degree, students learn
about the three
branches.

As the name Soil
Mechanics implies the
subject is concerned
with the deformation
and strength of bodies
of soil. It deals with the
mechanical properties
of the soil materials
and with the
application of the
knowledge of these
properties to
engineering problems.
In particular it is
concerned with the
interaction of

structures with their foundation material. This includes both conventional structures and also structures such as earth dams, embankments and roads which are themselves made of soil.
