The discovery in Morocco of the earliest known H. sapiens fossils might revise our ideas about human evolution in Africa. See Letters p.289 & p.293 Modern Homo sapiens share certain skeletal...

On the origin of our species | Nature

Advances in genetic analysis have revealed the first glimmerings of an older origin for H. sapiens, with the discovery that we and our sister species, the Neanderthals, shared a last common ancestor about half a million years ago. Such developments have led some to question the classification of a diverse array of early fossils from across Africa.

The origin of our species - ScienceDirect

Stringer is most concerned with the period from the emergence of Homo sapiens in Africa, around 195,000 years ago, to their arrival in Europe and the subsequent demise of the Neanderthals (who had...

The Origin of Our Species by Chris Stringer - review ...

Darwin hastily began an "abstract" of Natural Selection, which grew into a more-accessible book, On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life.

Charles Darwin - On the Origin of Species | Britannica

On the Origin of Species (or, more completely, On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life), published on 24 November 1859, is a work of scientific literature by Charles Darwin which is considered to be the foundation of evolutionary biology.

On the Origin of Species - Wikipedia

It was Charles Darwin who speculated that our origins were African, in the Descent of Man, published in 1871. The theory fell out of fashion for a long time. Forty years ago the notion that our species emerged out of Africa was fanciful. Today, Darwin is being vindicated.

The Origin of Our Species: Amazon.co.uk: Stringer, Chris ...

In considering the Origin of Species. It is quite conceivable that a naturalist, reflecting on the mutual affinities of organic beings, on their embryological relations, their geographical distribution, geological succession, and other such facts, might come to the conclusion that each species had not been independently created, but had descended, like varieties, from other species.

On the Origin of Species, 1st Edition by Charles Darwin

Origin of our species: Why humans were once so much more diverse The idea that all humans evolved from a small population in East Africa turns out to be wrong. Our beginnings were far stranger and...

Darwin publishes 'On the Origin of Species by Means of Natural Selection' Still wracked by doubt, Darwin finally published his new theory of evolution. It would become one of the most important...

Charles Darwin: Evolution and the story of our species ...

Stringer is one of the principal architects and proponents of the "Out-of-Africa" (OOA) hypothesis associated with the origin and dispersal of anatomically modern humans, i.e., Homo sapiens. According to Stringer and the OOA hypothesis, anatomically modern humans evolved in Africa nearly 200.

Lone Survivors: How We Came to Be the Only Humans on Earth ...

East Africa is where most scientists place our species' origins: two of the oldest known H. sapiens fossils — 196,000 and 160,000-year-old skulls 3, 4 — come from Ethiopia, and DNA studies of...

Oldest Homo sapiens fossil claim rewrites our species ...

There was a period of time in just one place where a small population of humans became modern, physically and behaviourally. Isolated and perhaps stressed by climate change, this drove a rapid and punctuational origin for our species. Now I don't think it was that simple, either within or outside of Africa.

RETHINKING "OUT OF AFRICA" | Edge.org

The oldest known bones of our species, dating back around 300,000 years, have been discovered in a cave in Morocco. The fossils — which belong to five individuals, including a teenager and a ...
