The Universe - Universe Today

The current scientific consensus of most cosmologists is that the ultimate fate of the universe depends on its overall shape, how much dark energy it contains and on the equation of state which determines how the dark energy density responds to the expansion of the universe.

Ultimate fate of the universe - Wikipedia

The vastness of the known universe, added to whatever else is in the universe currently unknown, all but precludes that the existence of the cosmos is a result of some spontaneous, chemical, physical reaction without a driving force behind it. Some entity, spirit, first driver, or, most likely, deity, had to have been behind it.
