The following chart is to help you find the correct model number of watch battery that can be used to replace your old or used battery.

How to find the right replacement Watch Battery

Watch/Button Battery Chart The SR prefix stands for the Silver Oxide chemistry. The LR prefix indicates an Alkaline chemistry, which makes the battery cheaper and of about a third of the milli-Amp capacity (mAh) of a Silver Oxide battery.

Watch/Button Battery Chart

The primary choices are silver oxide battery and alkaline watch batteries. Silver Oxide batteries are known for having a higher energy density and thus have the ability to generate more power for their size. These batteries typically last longer than their alkaline alternative. Warning: These should never be used on a battery charger, ever.

What battery does my watch need: Quick Guide

You should expect a watch to need a battery replacement every few years. To replace the "button battery" yourself, you'll need to know the 3- or 4-digit number that specifies its size. Read the back of the watch. The battery identification number may be specified there.

How to Determine the Battery Size for Your Watch

The Watch Battery Cross Reference table can be sorted by watch battery size, either by selecting the watch battery diameter, or the watch battery thickness (or height). This will give you an idea of which watch battery to choose if you do not have a watch battery cross reference number to match the battery against.

Watch Battery Cross Reference Table

Tap on your device, scroll down to "Battery," and you'll see your battery type.
